

GI Soft Diet

Diet prescribed by your provider

Overview:

- Indicated for the prevention and treatment of cardiovascular disease such as heart failure or heart attack
- Promotes: whole grains, fruits, vegetables, low-fat or fat-free dairy, and unsaturated fats

LIMITS: Saturated fat, cholesterol, sodium

Why:

- Too much **saturated fat** can cause cholesterol to build up in your arteries, making it difficult for blood to flow.
- Too much **salt** causes your body to hold extra water, which may cause blood pressure to rise. This can cause damage to your heart, kidneys, or liver as they are forced to work harder.

Food / Beverages Limited:

Saturated Fat and Cholesterol

Sources: Marbled (fatty) meat, poultry skin, bacon, sausage, whole milk, cream, & butter. Trans fats are found in stick margarine, shortening, some fried foods, baked goods, pastries, and packaged foods made with hydrogenated oils.

Sodium

Sources: processed foods such as cured meats, canned vegetables, condiments, some grains & dairy, salt added during cooking

Menu References
